## Thermocouple Fittings and Accessories

### Thermowells, Meltbolts and Closed-end Tubes

- Machined from solid barstock or fabricated from tube and pipe
- Standard materials include 316/L stainless steel, 304/L stainless steel, brass, carbon steel and PTFE (Teflon). Other material options are available.
- Available in threaded, weld-in, flanged and socket weld types. Other options can be supplied as per customer requirements.
- Shank options include straight, stepped, and tapered
- Fabricated thermowells also available in thermopocket design with integrated compression fitting end
- Fabricated thermowells can be TIG welded, laser welded, or silver brazed
- U-lengths of upto 200mm [8 in.] for solid barstock, 500mm [20 in.] for PTFE (Teflon) and 2000mm [80 in.] for fabricated thermowells
- Suitable for pressures up to 6000 psig [414 bar]
- Threaded ends protected with colour coded caps for instant thread identification
- Meltbolts supplied with 1/2-20 UNF thread as standard. Other threads can be supplied.
- Closed-end tubes available
